Shayne Torres

Senior iOS Engineer · Tech Lead · BLE / NFC / Connected Hardware

Murrieta, CA | shayneptorres@gmail.com | (951) 285-0997 | linkedin.com/in/shayneptorres

Summary

Senior iOS engineer with 10 years of experience shipping native apps across medical devices, consumer, sports tech, and SaaS. Most recently tech lead for hardware integration at Dexcom, owning how iOS talks to continuous glucose monitors over **Bluetooth LE** and **NFC** and ships **over-the-air firmware updates**. Leads teams well: sets architecture, mentors engineers, and pushes for testable, maintainable codebases. Trained the Dexcom iOS team on **AI coding agents and agentic workflows** and built internal tooling around them. Also builds and ships independent apps and client work end to end.

Experience

Senior Software Engineer (iOS) — Tech Lead, Hardware Integration, Dexcom – San Diego, CA — Apr 2024 – Oct 2026

- Tech lead for iOS hardware integration across Dexcom's CGM platform, owning BLE connectivity, NFC, and OTA firmware update flows.
- Led a team of 7 iOS engineers and served as a staff-level technical leader for the full mobile team (about 15 iOS and Android engineers), setting technical direction, reviewing designs and code, and mentoring engineers on CoreBluetooth and device-communication patterns.
- Designed and delivered OTA firmware update support for CGM hardware from the iOS app, with a focus on reliability, recovery from interrupted transfers, and patient safety.
- Built NFC-based device interactions with Core NFC alongside BLE pairing and connection management.
- Worked closely with V&V, design, backend, cloud, hardware, and firmware teams to ship features within an FDA-regulated medical device development process.
- Led the team's adoption of AI coding agents and agentic workflows (Claude Code, Codex, Gemini, Antigravity, GitHub Copilot), training engineers over four months to use them across the development lifecycle.
- Built internal agentic tooling that sped up debugging, log fetching, data querying, release procedures, and new feature implementation.

Software Developer (Contract), Artisan Workshop – Murrieta, CA — Oct 2023 – present

- Architected, designed, built, and launched a new sports and fitness iOS app for a client.
- Analyzed user behavior and shipped targeted feature updates that grew the user base and improved retention.

Senior Software Engineer (iOS), Ancestry – San Francisco, CA (Remote) — Jan 2023 – Mar 2024

- Co-led a platform-wide mobile refactor built around real user habits, increasing user-generated content and overall activity.
- Co-led a department-wide initiative to improve unit testing practices, driving steady growth in test coverage across engineering.
- Led the effort to replace non-native web views with native UI, improving UX and increasing activity in those areas of the app.

Senior Software Engineer (iOS), Dexcom – San Diego, CA — July 2020 – Jan 2023

- Led a team of 3 iOS engineers to architect, design, and build a new hospital-focused app integrating Dexcom's Bluetooth CGM technology.
- Co-led development of a new mobile SDK, opening the platform to third-party integrations.

Software Engineer (iOS), Raken – Carlsbad, CA Oct 2019 – July 2020

- Played an integral role in a large-scale refactor of the flagship app's data layer, contributing to gains in user acquisition and retention.

iOS Developer, Blast Motion – Carlsbad, CA Mar 2018 – Oct 2019

- Co-led a large-scale UI/UX overhaul that raised user engagement and reduced support calls.
- Contributed to an internal SDK for communicating with Bluetooth motion sensors.

Software Engineer (iOS), National Merchants Association – Temecula, CA Aug 2016 – Mar 2018

Skills

Languages: Swift, Objective-C, TypeScript / JavaScript

Apple Platforms: iOS, iPadOS, macOS, SwiftUI, UIKit, Swift Concurrency (async/await), Combine, SwiftData, Core Data, WidgetKit

Hardware & Connectivity: CoreBluetooth (BLE), Core NFC, OTA / DFU firmware updates, device SDKs, background execution

Architecture & Quality: MVVM, Clean Architecture, modularization, XCTest / Swift Testing, CI/CD, TestFlight & App Store release

Other: React Native, Firebase, REST APIs, Realm, RxSwift

AI & Agentic Tooling: Claude Code, OpenAI Codex, Gemini, Google Antigravity, GitHub Copilot, agentic workflows, internal developer tooling

Leadership: Tech lead, mentoring, cross-functional delivery, Agile / Scrum, regulated (FDA) development

Projects

WorkMode: Independent iOS app, published on the App Store.

Bible Words: Independent iOS app, published on the App Store.

Scholia: Native iOS / iPadOS / macOS reader for long-form research docs, with a custom structured-markdown format and iCloud-synced annotations.

Curio: iOS runtime for single-file web apps on WKWebView, with a native JavaScript bridge API and iCloud persistence.

Education

Arizona State University, BS in Software Engineering – Tempe, AZ
